

Isotonix® 101

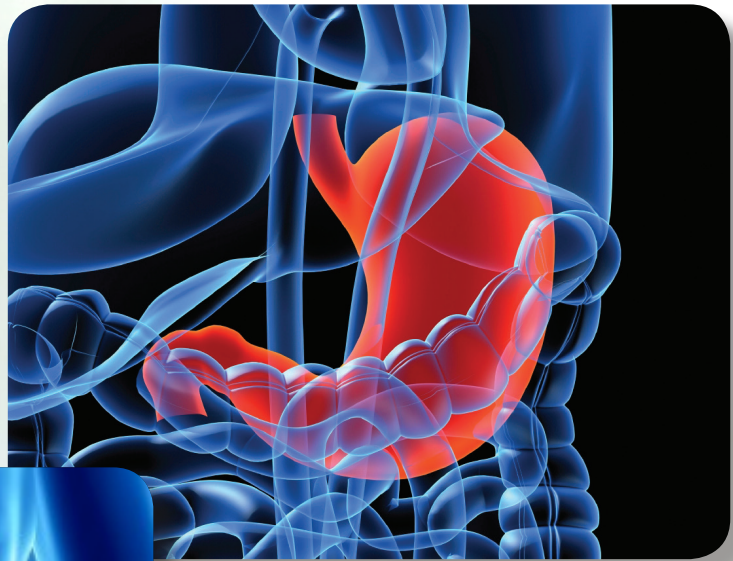

Isotonix /īsə'tānix/ n.

A **brand** of products which have a nutritional delivery system that promotes nutrient availability and absorption.

Absorption /əb'zôrpSHən/ n.

The act or process of absorbing or assimilating substances (such as nutrients) into cells, tissues and organs through diffusion or osmosis.

1 Isotonix solutions enter the digestive tract in a form that supplies nutrients at just the right rate, eliminating the need for further breakdown in the stomach.

2 Tablets and capsules may remain in your digestive tract for hours, due to the need to break them down. Unlike other products, Isotonix solutions are in a form that allows for quick absorption.

3 Isotonix products are powders, none of the fillers, binders and coatings that are common to tablet manufacturing. As a result, the amount of time and work necessary to absorb a supplement is greatly decreased.
