

GoTrim[®] Slim is powered by Slendacor[®]

Clinically shown to support weight loss and help reshape the body.

The science behind the power of 900 mg

Metabolic benefits:

Slendacor's ingredients stimulated resting metabolic rate (RMR) in as little as 120 minutes. Higher RMR is associated with increased caloric burning.

- ◆ This demonstrates it can support the body's ability to burn more calories throughout the day, even at rest, but does so as a thermogenic (or heat) instead of acting as a stimulant.
- ◆ It promotes breakdown of fat cells (lipolysis). Slendacor is distinct from other products that stimulate resting energy expenditure (REE), an important measure of thermogenesis and a primary consideration when choosing a weight loss product. Participants using Slendacor reported no increase in blood pressure or heart rate, supporting regular use and ongoing weight loss over time.

Positive effects on lipid profiles:

- ◆ Ghrelin levels: Participants using Slendacor showed a 20% drop in ghrelin levels by the end of the study. Ghrelin is the hunger hormone that communicates to the brain that you are hungry.
- ◆ Adiponectin levels and lipid metabolism: Study demonstrated support for healthy adiponectin levels, a hormone connected to lipid metabolism and fat breakdown.

Key findings: Double-blind clinical studies on individuals supplementing with a 900 mg daily serving of Slendacor[†] in conjunction with a healthy diet and exercise.
